

1 ABSTRACT OF THE DISCLOSURE

2

3 A washable container made from soft flexible material, including open-weave fabric, with a top
4 opening and optionally removable straps with fasteners that allow attachment to cribs and other
5 baby-holding devices, such as portable play yards, swings, highchairs, and strollers. The top
6 opening is configured for insertion of a large adult male hand, and the container height provides
7 an interior volume sufficient for storing approximately one dozen or so pacifiers, several
8 teething devices, or other small toys that babies and small children often drool on, drop on the
9 ground, cover with food, and/or otherwise need cleaning prior to being returned to them. Thus,
10 unsanitary pacifiers, toys, and teething devices can be placed in a disposable plastic bag,
11 clothing pocket, diaper bag pocket, or other temporary storage place, with a clean pacifier,
12 teething device, or other small toy being instantly substituted from the readily accessible and
13 conveniently located present invention.
